From:

Sub: Health Condition Report of

M/C for the month of

To:

ENGINE

Present Engine Hours:

S. No.	Description	Condition	Remarks
01.	Engine Make		
02.	Engine Model		
03.	Engine Sl. No.		
04.	Engine Working Hours		
05.	Date of Commissioned Engine		
06	New/Overhauled/Repaired		
07.	Starting Problem		
08.	Condition of Smoke		
09.	Ma. Temp During Working		
10.	Leakage in Head Gasket		
11.	Electrolyte level in Battery		
12.	Specific Gravity of Battery		
13.	Compressor Working		
14.	Belt Tension		
15.	Condition of Hoses		
16.	Water Seal Pump		
17.	RPM of Engine	Rated: Actual:	
18.	Engine Oil Pressure	Rated: Actual:	
a.	At Idle		
b.	At Rated Speed		
19.	Last Change of Air Cleaner	Date: Ehr:	500 Hr Schedule
20.	Last Change of Engine Oil	Date: Ehr:	
21.	Last Change of Engine Oil Filter	Date: Ehr:	300 Hr Schedule
22.	Last Change of Diesel Filter	Date: Ehr:	
23.	Last Repair/Change of Batteries	Date: Ehr:	
24.	Radiator Fan		
25.	Self Starter		
26.	Last Repair/Change of Self Starter	Date: Ehr:	
27.	Alternator	Date: Ehr:	
28.	Last Repair/Change of Alternator	Date: Ehr:	
29.	Last overhauling of Engine	Date: Ehr:	
30.	Last Calibration of PT Pump	Date: Ehr:	
31.	Last Calibration of Injector	Date: Ehr:	
32.	Last Calibration of Turbocharger	Date: Ehr:	
33.	Last Over Hauling of Radiator	Date: Ehr:	
34.	Engine Temperature Safety Circuit		
35.	Engine Pressure Safety Circuit		
36.	Any Abnormal Sound		
37.	Last Service Engineer Attended	Date: Ehr:	
38.	Last 300 Engine Hour Schedule Attended	Date: Ehr:	
39.	Repairs Attended During This Month	Date: Ehr:	
40.	Whether Working Gauges are in order		
a.	RPM		
b.	Oil Pressure		
c.	Temperature		
d.	Battery Charging		
41.	Last Diesel Tank Cleaned	Date: Ehr:	
42	Last Hydraulic Oil Tank Cleaned	Date: Ehr:	

TAMPING BANK

Last Change of Tamping Bank

NACHINE INSPECTED BY DATE DIVISION		INSPEC	CTION REPORT OF	BRAKE SYSTE	M OF TRACK MA	ACHINE
S. No. Inspection	MA	CHINE	INSPECTED BY	DATE	DIVISION	STATION
S. No. Inspection						
01. Check Oil Level in Compressor Crank Case and temp 02. Check Air Unloader, Safety Valve, Air Lubricator, Water Trap for Leakages 03. Inspect for Leakages in Hose Connection, Compressors & Drain Valves of Reserviors 04. Inspect Cooling Coil for Clogging and Clean, as required 05. Check function of Air Unloader and Set Pressure to 7.3kf/cm² 06. Check Safety Valve Functioning at 8kg/cm² 07. Check Piping, Visually Inspect Hoses for Damage, if required 08. Check Functioning of Sequence Valve 09. Check Gondition of Brake Liner and Change, if required 10. Check Gap between Wheel and Brake Liner in both Brake Applied and Released Condition. Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required 11. Charge Emergency Reservoir for Required Air Pressure 02. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder Applied in Brake Cylinder 3. Release Brake Pressure from KE valve and Check Functioning 04. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes 01. Check for Proper Functioning and Adjust, if Required 02. Lubricate Both Sets of Crown Wheel and Brake				Air Brake		
temp 02. Check Air Unloader, Safety Valve, Air	S. No.	_			Deficiency	Action
02. Check Air Unloader, Safety Valve, Air Lubricator, Water Trap for Leakages 03. Inspect for Leakages in Hose Connection, Compressors & Drain Valves of Reserviors 04. Inspect Cooling Coil for Clogging and Clean, as required 05. Check function of Air Unloader and Set Pressure to 7.3kf/cm² 06. Check Safety Valve Functioning at 8kg/cm² 07. Check Piping, Visually Inspect Hoses for Damage, if required 08. Check Functioning of Sequence Valve 09. Check Condition of Brake Liner and Change, if required 10. Check Gap between Wheel and Brake Liner in both Brake Applied and Released Condition. Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required 11. Check for Leakages from Air Brake (where provided) 01. Charge Emergency Reservoir for Required Air Pressure Applied in Brake Cylinder 02. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder 03. Release Brake Pressure from KE valve and Check Functioning 04. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes 01. Check for Proper Functioning and Adjust, if Required 02. Lubricate Both Sets of Crown Wheel and Brake	01.	Check Oi	l Level in Compressor	Crank Case and		
Lubricator, Water Trap for Leakages 03. Inspect for Leakages in Hose Connection, Compressors & Drain Valves of Reserviors 04. Inspect Cooling Coil for Clogging and Clean, as required 05. Check function of Air Unloader and Set Pressure to 7.3kf/cm² 06. Check Safety Valve Functioning at 8kg/cm² 07. Check Piping, Visually Inspect Hoses for Damage, if required 08. Check Functioning of Sequence Valve 09. Check Condition of Brake Liner and Change, if required 10. Check Gap between Wheel and Brake Liner in both Brake Applied and Released Condition. Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required 12. Charge Emergency Reservoir for Required Air Pressure Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder 03. Release Brake Pressure from KE valve and Check Functioning 04. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brake 01. Check for Proper Functioning and Adjust, if Required 02. Lubricate Both Sets of Crown Wheel and Brake		_				
03. Inspect for Leakages in Hose Connection, Compressors & Drain Valves of Reserviors 04. Inspect Cooling Coil for Clogging and Clean, as required 05. Check function of Air Unloader and Set Pressure to 7.3kf/cm² 06. Check Safety Valve Functioning at 8kg/cm² 07. Check Piping, Visually Inspect Hoses for Damage, if required 08. Check Functioning of Sequence Valve 09. Check Condition of Brake Liner and Change, if required 10. Check Gap between Wheel and Brake Liner in both Brake Applied and Released Condition. Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required 12. Charge Emergency Reservoir for Required Air Pressure 02. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder 03. Release Brake Pressure from KE valve and Check Functioning 04. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes 01. Check for Proper Functioning and Adjust, if Required 02. Lubricate Both Sets of Crown Wheel and Brake	02.		<u> </u>			
Compressors & Drain Valves of Reserviors 04. Inspect Cooling Coil for Clogging and Clean, as required 05. Check function of Air Unloader and Set Pressure to 7.3kf/cm² 06. Check Safety Valve Functioning at 8kg/cm² 07. Check Piping, Visually Inspect Hoses for Damage, if required 08. Check Functioning of Sequence Valve 09. Check Condition of Brake Liner and Change, if required 10. Check Gap between Wheel and Brake Liner in both Brake Applied and Released Condition. Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required 12. Charge Emergency Reservoir for Required Air Pressure 13. Charge Emergency Brake and Monitor Pressure Applied in Brake Cylinder 14. Check For Leakages from Air Brake Cylinders and Attend, if required 15. Charge Emergency Reservoir for Required Air Pressure 16. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder 17. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder 18. Release Brake Pressure from KE valve and Check Functioning 19. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² 19. Parking Brakes 10. Check for Proper Functioning and Adjust, if Required 10. Check For Forotom Wheel and Brake						
04. Inspect Cooling Coil for Clogging and Clean, as required 05. Check function of Air Unloader and Set Pressure to 7.3kf/cm² 06. Check Safety Valve Functioning at 8kg/cm² 07. Check Piping, Visually Inspect Hoses for Damage, if required 08. Check Functioning of Sequence Valve 09. Check Condition of Brake Liner and Change, if required 10. Check Gap between Wheel and Brake Liner in both Brake Applied and Released Condition. Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required 11. Charge Emergency Reservoir for Required Air Pressure 01. Charge Emergency Brake and Monitor Pressure Applied in Brake Cylinder 02. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder 03. Release Brake Pressure from KE valve and Check Functioning 04. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes 01. Check for Proper Functioning and Adjust, if Required 02. Lubricate Both Sets of Crown Wheel and Brake	03.					
required 05. Check function of Air Unloader and Set Pressure to 7.3kf/cm² 06. Check Safety Valve Functioning at 8kg/cm² 07. Check Piping, Visually Inspect Hoses for Damage, if required 08. Check Functioning of Sequence Valve 09. Check Condition of Brake Liner and Change, if required 10. Check Gap between Wheel and Brake Liner in both Brake Applied and Released Condition. Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required 11. Charge Emergency Reservoir for Required Air Pressure 02. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder 03. Release Brake Pressure from KE valve and Check Functioning 04. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes 01. Check for Proper Functioning and Adjust, if Required 02. Lubricate Both Sets of Crown Wheel and Brake						
05. Check function of Air Unloader and Set Pressure to 7.3kf/cm² 06. Check Safety Valve Functioning at 8kg/cm² 07. Check Piping, Visually Inspect Hoses for Damage, if required 08. Check Functioning of Sequence Valve 09. Check Condition of Brake Liner and Change, if required 10. Check Gap between Wheel and Brake Liner in both Brake Applied and Released Condition. Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required Emergency Brake (where provided) 01. Charge Emergency Reservoir for Required Air Pressure 02. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder 03. Release Brake Pressure from KE valve and Check Functioning 04. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes 01. Check for Proper Functioning and Adjust, if Required 02. Lubricate Both Sets of Crown Wheel and Brake	04.		ooling Coil for Cloggin	ng and Clean, as		
Pressure to 7.3kf/cm² 06. Check Safety Valve Functioning at 8kg/cm² 07. Check Piping, Visually Inspect Hoses for Damage, if required 08. Check Functioning of Sequence Valve 09. Check Condition of Brake Liner and Change, if required 10. Check Gap between Wheel and Brake Liner in both Brake Applied and Released Condition. Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required Emergency Brake (where provided) 01. Charge Emergency Reservoir for Required Air Pressure Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder 03. Release Brake Pressure from KE valve and Check Functioning 04. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes 01. Check for Proper Functioning and Adjust, if Required 02. Lubricate Both Sets of Crown Wheel and Brake						
06. Check Safety Valve Functioning at 8kg/cm² 07. Check Piping, Visually Inspect Hoses for Damage, if required 08. Check Functioning of Sequence Valve 09. Check Condition of Brake Liner and Change, if required 10. Check Gap between Wheel and Brake Liner in both Brake Applied and Released Condition. Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required Emergency Brake (where provided) 01. Charge Emergency Reservoir for Required Air Pressure Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder 03. Release Brake Pressure from KE valve and Check Functioning 04. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes 01. Check for Proper Functioning and Adjust, if Required 02. Lubricate Both Sets of Crown Wheel and Brake	05.			and Set		
07. Check Piping, Visually Inspect Hoses for Damage, if required 08. Check Functioning of Sequence Valve 09. Check Condition of Brake Liner and Change, if required 10. Check Gap between Wheel and Brake Liner in both Brake Applied and Released Condition. Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required 11. Charge Emergency Reservoir for Required Air Pressure 02. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder 03. Release Brake Pressure from KE valve and Check Functioning 04. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes 01. Check for Proper Functioning and Adjust, if Required 02. Lubricate Both Sets of Crown Wheel and Brake				2		
Damage, if required 08. Check Functioning of Sequence Valve 09. Check Condition of Brake Liner and Change, if required 10. Check Gap between Wheel and Brake Liner in both Brake Applied and Released Condition. Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required Emergency Brake (where provided) 01. Charge Emergency Reservoir for Required Air Pressure 02. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder 03. Release Brake Pressure from KE valve and Check Functioning 04. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes 01. Check for Proper Functioning and Adjust, if Required 02. Lubricate Both Sets of Crown Wheel and Brake						
08. Check Functioning of Sequence Valve 09. Check Condition of Brake Liner and Change, if required 10. Check Gap between Wheel and Brake Liner in both Brake Applied and Released Condition. Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required Emergency Brake (where provided) 01. Charge Emergency Reservoir for Required Air Pressure 4 Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder 03. Release Brake Pressure from KE valve and Check Functioning 04. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes 01. Check for Proper Functioning and Adjust, if Required 02. Lubricate Both Sets of Crown Wheel and Brake	07.			Hoses for		
09. Check Condition of Brake Liner and Change, if required 10. Check Gap between Wheel and Brake Liner in both Brake Applied and Released Condition. Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required Emergency Brake (where provided) 01. Charge Emergency Reservoir for Required Air Pressure Applied in Brake Cylinder 02. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder 03. Release Brake Pressure from KE valve and Check Functioning 04. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes 01. Check for Proper Functioning and Adjust, if Required 02. Lubricate Both Sets of Crown Wheel and Brake			-			
required 10. Check Gap between Wheel and Brake Liner in both Brake Applied and Released Condition. Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required Emergency Brake (where provided) 01. Charge Emergency Reservoir for Required Air Pressure 02. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder 03. Release Brake Pressure from KE valve and Check Functioning 04. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes 01. Check for Proper Functioning and Adjust, if Required 02. Lubricate Both Sets of Crown Wheel and Brake						
10. Check Gap between Wheel and Brake Liner in both Brake Applied and Released Condition. Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required Emergency Brake (where provided) O1. Charge Emergency Reservoir for Required Air Pressure O2. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder O3. Release Brake Pressure from KE valve and Check Functioning O4. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes O1. Check for Proper Functioning and Adjust, if Required O2. Lubricate Both Sets of Crown Wheel and Brake	09.		ondition of Brake Liner	and Change, if		
both Brake Applied and Released Condition. Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required Emergency Brake (where provided) 01. Charge Emergency Reservoir for Required Air Pressure O2. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder 03. Release Brake Pressure from KE valve and Check Functioning 04. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes 01. Check for Proper Functioning and Adjust, if Required 02. Lubricate Both Sets of Crown Wheel and Brake						
Adjust as required 11. Check for Leakages from Air Brake Cylinders and Attend, if required Emergency Brake (where provided) O1. Charge Emergency Reservoir for Required Air Pressure O2. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder O3. Release Brake Pressure from KE valve and Check Functioning O4. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes O1. Check for Proper Functioning and Adjust, if Required O2. Lubricate Both Sets of Crown Wheel and Brake	10.					
11. Check for Leakages from Air Brake Cylinders and Attend, if required Emergency Brake (where provided) O1. Charge Emergency Reservoir for Required Air Pressure O2. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder O3. Release Brake Pressure from KE valve and Check Functioning O4. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes O1. Check for Proper Functioning and Adjust, if Required O2. Lubricate Both Sets of Crown Wheel and Brake				d Condition.		
Emergency Brake (where provided) O1. Charge Emergency Reservoir for Required Air Pressure O2. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder O3. Release Brake Pressure from KE valve and Check Functioning O4. Destroy Air Pressure in Main Reservoir and Ensure the Brakes are Applied Automatically when Main Reservoir Pressure Drops below 3.4kg/cm² Parking Brakes O1. Check for Proper Functioning and Adjust, if Required O2. Lubricate Both Sets of Crown Wheel and Brake						
Emergency Brake (where provided) O1. Charge Emergency Reservoir for Required Air Pressure O2. Apply Emergency Brake and Monitor Pressure Applied in Brake Cylinder O3. Release Brake Pressure from KE valve and Check Functioning O4.
